

NOTICE TO MARINERS

North Falls Offshore Wind Farm - Notice to Mariners. Issue Date 24/09/2026 (Third issue).

Overview

Mariners are advised that North Falls Offshore Wind Farm (NFOWF) are undertaking a metocean survey within the Wind Turbine Array Area, at the Primary and Secondary locations shown in Table 1 and Figure 2.

Survey Duration

The metocean equipment was deployed on 17 April 2026, with the metocean survey lasting between 12 and 18 months. The planned survey end date will be no later than 16 August 2027.

Survey Tasks (Service Visit No. 2)

The metocean survey work is being undertaken by Partrac, who will use the vessel Tom Scruby to recover, service and re-deploy the metocean equipment at the Primary and Secondary locations shown in Table 1 and Figure 2.

It is expected that the recovery, servicing and re-deployment operations will last for approximately five days, commencing on or after 29 September 2026.

The metocean equipment consists of one seabed frame deployed at each location (i.e., a total of two seabed frames). Each seabed frame will be equipped with an acoustic Doppler current profiler (ADCP) and additional sensors (temperature sensor, water-level sensor, and turbidity sensor). Each seabed frame will be connected to a clump weight, with approximately 100 m leaded polypropylene ground line between the seabed frame and clump weight.

The metocean equipment is not marked with surface buoys.

As a consequence of equipment being serviced, all mariners are advised to keep a safe clearance distance of no less than 500 m from the service vessel and metocean equipment deployment locations. No towed survey equipment will be deployed from the vessel.

Figure 1: Example Seabed Frame

Table 1 – Deployment Locations

Location	Latitude (DD)	Longitude (DD)	Latitude (DDM)	Longitude (DDM)
Primary (North)	51.7584° N	1.8944° E	51° 45.504' N	01° 53.664' E
Secondary (South)	51.6944° N	1.8769° E	51° 41.664' N	01° 52.614' E
